

AUTOVUE VUELINK INTEGRATION FOR ORACLE UNIVERSAL CONTENT MANAGEMENT

KEY FEATURES AND BENEFITS

KEY FEATURES

- Web-based document viewing
- Hundreds of supported formats
- Real-time collaboration
- 3D Walkthrough
- Work offline
- Document comparison
- Measurements
- Markups & annotations stored in the content management repository
- Manage X-REFS, assemblies, annotations with UCM Folios
- Burn in redactions to TIFF
- Search functions
- Renditions generation

KEY BENEFITS

- View CAD and engineering files within Oracle Universal Content Management
- Empower teams with access to both engineering, asset and Office documents
- Enhance and speed up review cycles
- Audit trail compliance
- Maintain document integrity and collaborate securely without risking IP
- Extend workflows and team reviews
- Reduce costs related to the purchase of expensive authoring applications
- Optimize business processes with IntelliStamp

Oracle's AutoVue VueLink Integration for Oracle Universal Content Management (UCM) adds the powerful document visualization and digital annotation capabilities of Oracle's AutoVue solutions to the UCM platform, delivering web-based viewing of engineering drawings, CAD and Office documents. When integrated with Oracle Universal Content Management, AutoVue provides the ability to access and collaborate on engineering and asset documents across the entire enterprise, delivering a compelling solution for asset intensive industries, such as oil and gas, utilities and engineering and construction.

Extend the Value of Your UCM Investment

Oracle Universal Content Management provides a centralized repository to publish and maintain business documents and information. AutoVue enterprise visualization solutions enable users to view, annotate, and collaborate on documents without requiring the authoring applications and without altering the original document. AutoVue VueLink Integration for Oracle Universal Content Management bridges these two solutions so users can efficiently open, view and review any document directly from within the UCM environment.

Standardize on a Single Visualization Solution

AutoVue enterprise visualization solutions allow users to access, view, and review hundreds of document types including 2D computer-aided design (CAD) drawings, 3D models, printed circuit board (PCB) layouts and schematics, and Microsoft Office documents. By standardizing on a single solution for all visualization requirements, the cost of purchasing, managing, and training employees to use multiple viewing and authoring applications is eliminated. Organizations can greatly reduce their licensing and maintenance costs and simplify their IT infrastructure.

No Data Conversion Required

By handling data natively, AutoVue visualization solutions allow users to open, view, and review original documents without undergoing costly and error-prone conversions. Because file conversion is not required, the tedious task of creating and managing a duplicate set of data is eliminated. Users can be confident that they are always working with the latest version of a file, and that business decisions are based on accurate information.

Expedite Reviews & Capture Reliable Audit Trail

Adding the powerful markup and real-time collaboration capabilities of AutoVue products to Oracle Universal Content Management, organizations can expedite review cycles and capture an audit trail of all changes, decisions and approvals for full accountability and compliance.

AutoVues' rich set of markup entities allows users to digitally annotate documents and effectively capture comments, change requests, and instructions within the design context, which are recorded and tracked digitally. All markups and annotations are created as distinct overlays—on top of the original file—and stored directly into the Oracle Universal Content Management vault. Reviewers can then turn markup layers on and off as needed, selecting only those that they wish to view.

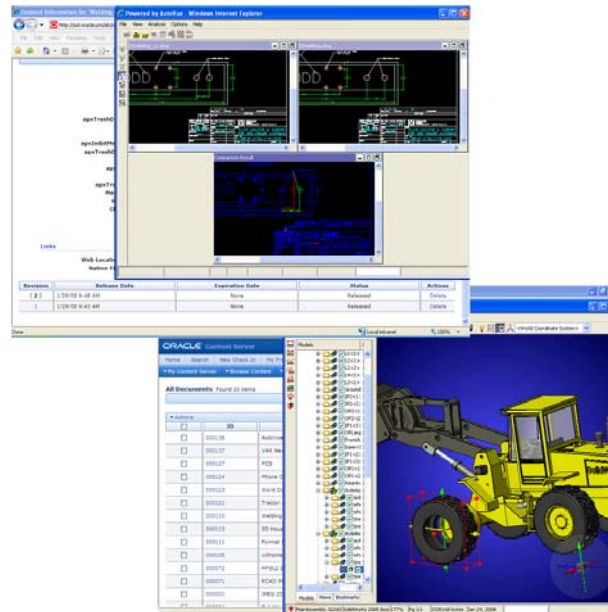

Figure 1: View, review, markup and collaborate on hundreds of document types in their native format—directly within your Oracle Universal Content Management environment.

Optimize Enterprise Business Processes

AutoVue's IntelliStamp capability enables electronic signing and stamping of documents with pre-defined attributes set in Oracle Universal Content Management. Users can create custom IntelliStamp "forms" that include specific metadata, document and user information pulled directly from Oracle Universal Content Management, and apply them to documents. Authorized reviewers can then easily modify, add or delete attributes values, either from Oracle Universal Content Management or from within IntelliStamp.

With IntelliStamp, organizations can accelerate internal business processes by allowing users to trigger workflow actions, such as invoicing or time sheet generation directly from within documents reviewed in AutoVue. This direct interaction enables organizations to significantly improve business process efficiencies through workflow automation.

**MAXIMIZE PRODUCTIVITY
WITH ENTERPRISE
INTEGRATION**
**ORACLE'S AUTOVUE
ENTERPRISE
VISUALIZATION
SOLUTIONS**

AutoVue solutions can be integrated into existing content management, product lifecycle management, or enterprise applications, such as ALM, & Project Planning to name a few. Integrated with existing enterprise systems, AutoVue connects information, people and processes, delivering anytime, anywhere access to vital information and maximizing business process efficiency.

Teams can better collaborate around their engineering and product documents and make sound business decisions, driving innovation and operational efficiency.

Share Documents Securely without Risking IP

AutoVue enterprise visualization solutions deliver instant and secure access to original documents without leaving a document footprint on the client's machine. AutoVue VueLink Integration for Universal Content Management follows UCM permission settings and ensures that the original document, with its proprietary data, is never transferred to the client machine. Users only have access to a rendering of a document for viewing and markup. The original document is never altered and all markups and annotations are directly saved in the UCM vault.
